Amid consistent rise in deaths of pedestrians and cyclists, Punjab has taken the lead among the states and UTs to implement the 'right to walk' by making it mandatory for all road owning agencies, including the NHAI, to provide foot path and cycle tracks in all future expansion of roads and construction of new ones, reports **Dipak Dash**.

The state government has issued these directions following two court orders after PILs were filed at Punjab and Haryana HC and another in the Supreme Court.

As per a communication from Punjab chief secretary Vijay Kumar Janjua to Punjab government's traffic adviser, Navdeep Asija, "in future all expansions of existing roads and construction of new roads, a mandatory provision of cycle tracks and footpaths should be made by all road owning departments and agencies".

The letter sent last week added that all agencies such as the public works department, local bodies, NHAI and urban development departments have been instructed to prepare an action plan to construct footpaths and cycle tracks with a time frame and budget provision.

TIMES VIEW: The right to walk is a cool idea. Pedestrian walkways and cycle tracks must be built everywhere. However, we must also audit the existing tracks and examine their lacunae. For instance, such tracks are regularly invaded by motorbikes. That apart, pedestrian-only tracks often have huge gaps, which makes walking a dangerous exercise. In other words, the right to walk must be converted into a proper mission with every angle taken care of to make it a success.

Given below are two statements :

Statement I : On morphological grounds, scientists speculated that mitochondria and chloroplasts might be intracellular parasites that has established symbiotic relationship with the eukaryotic cells.

Statement II : Blue-green algae thought to have originated the mitochondria, and bacteria have originated the chloroplasts.

In the light of the above statements, choose the *correct answer* from the options given below :

1. Both Statement I and Statement II are true
2. Both Statement I and Statement II are false
3. Statement I is true but Statement II is false
4. Statement I is false but Statement II is true

नीचे दो कथन दिए गए हैं :

कथन I : वैज्ञानिकों ने यह अनुमान लगाया कि आकृति के आधार पर माइटोकॉन्ड्रिया तथा हरित-लवक अंतः कोशिकीय परजीवी हो सकते हैं जिन्होंने ससीमकेन्द्रकीय (यूकेरियोटिक) कोशिकाओं के साथ सहजीवी संबंध स्थापित कर लिया है।

कथन II : ऐसा माना जाता है कि नील-हरित शैवाल द्वारा माइटोकॉन्ड्रिया का प्रादुर्भाव हुआ तथा जीवाणुओं द्वारा हरितलवकों का प्रादुर्भाव हुआ।

उपरोक्त कथनों के आलोक में, नीचे दिए गए विकल्पों में से **सबसे उपयुक्त उत्तर** का चयन कीजिए :

Based on the context given below, answer the following questions:

DNA in eukaryotes is a double-helical structure with two anti-parallel strands intertwined equidistantly. The double-helical structure was deciphered by James Watson and Francis Crick on the basis of X-ray diffraction studies. The hydrophilic backbones of alternating sugar and phosphate groups are on the outside of the helix held together by phosphodiester bonds. The purine and pyrimidine bases of both the strands are stacked inside the double helix. Adenine binds with thymine with hydrogen bond and cytosine binds with guanine with hydrogen bond. The DNA is transcribed into messenger RNA, ribosomal RNA and transfer RNA. Messenger RNA is translated into protein in the cytoplasm.

Consider a DNA segment :

5' – G T A A C C T A C C G – 3'

3' – C A T T G G A T G G C – 5'

If the RNA polymerase transcribes the segment from left to right, the mRNA sequence would be

1. 5' – C A U U G G A U G G C – 3'

2. 5' – G U A A C C U A C C G – 3'

3. 5' – C G G U A G G U U A C – 3'

4. 5' – G C C A U C C A A U G – 3'

ससीम केन्द्रकी (यूकेरियोट) में डी.एन.ए. एक द्विकुंडली संरचना है। इसकी दो शृंखलाएँ प्रति समानांतर, कुंडलित और एक समान दूरी पर होती हैं। द्विकुंडली संरचना का नमूना जेम्स वाट्सन और फ्रान्सिस क्रीक ने एक्स-रे निवर्तन आँकड़े के आधार पर दिया। जलरागी आधार शर्करा-फॉस्फेट का बना होता है व क्षार भीतर की ओर प्रक्षेपी होता है। दोनों शृंखलाएँ फोस्फोडाइस्टर आबंधों से जुड़ी होती हैं। द्विकुंडली में प्यूरीन और पिरीमिडीन एक क्षार युग्म की सतह पर एक के ऊपर एक स्थित होते हैं। एडीनीन, हाइड्रोजन बंध द्वारा थाइमिन से युग्मित होती है और साइटोसिन, ग्वानीन के साथ हाइड्रोजन बंध द्वारा बंधा रहता है। डी.एन.ए. का अनुलेखन, दूत आर.एन.ए., राइबोसोमल आर.एन.ए. और अंतरण आर.एन.ए. में होता है। दूत आर.एन.ए. का रूपांतरण कोशिका द्रव्य में प्रोटीनों में होता है।
